

Chana Chadad and Adi Kobi

Middle-Mini-report

After the meeting with Ronen, we met again with our advisor Prof. Shmuel Peleg.

During the meeting with Prof. Shmuel Peleg we decided on a schedule for this semester.

Prof. Shmuel emphasized that before implementing the algorithms, we need to invest time in learning them deeply. So, we start by learning the first article that we want to implement (in order to choose at the end the best way to create the final image), the article is about photomontage, we read the article and learned the algorithm that we want to implement. We start thinking about the implementation part and we will continue working on it in this month.

After the meeting we update our first report (as we talk with the staff before), send it to the mail course and upload it to the drive folder that Ronen open for us.

As required, we open a GitHub repository and upload the relevant files.
